Contents

Room for indulgence: **ILBAGNOALESSI One** is a modern classic; its poetic, sensual design brings emotional depth to your bathroom. A creation of the prolific Italian designer, Stefano Giovannoni. p. 16

Perfectly balanced: **ILBAGNOALESSI dOt** sets the scene for purist bathing. The understated geometrical shapes of the bath lend an air of peace and relaxation. p. 30

Fingerprint of nature: The **PALOMBA COLLECTION** was designed with nature as its inspiration. Its natural forms combine effortlessly to create a harmonious whole. p. 46

Timeless design for well-being: The desire to feel good is the most natural thing in the world, not just nowadays, but also for thousands of years. **mylife** brings the art of well-being straight to the bathroom. p. 40

With **living**, LAUFEN presents bathrooms that are as multifaceted as life itself and designed for modern living: each of the four living models blend harmoniously into various lifestyles. p. 66

With **Lb3**, decoration is allowed: A home is not a snapshot of a moment but reflects the diversity of the householder's life, ideas and possessions. LAUFEN provides a matching bathroom design. p. 90

Better quality of life: **form** brings classic contemporary to the bathroom – and, with its various washbasins, ample functionality. Its timeless design makes **form** compatible with many styles of fittings. p. 116

A bathroom with a heart: **mimo** is a compact bathroom for people who live conscientiously and value attention to detail – but do not wish to be hampered by social conventions. Winner of the red dot award 2009. p. 132

Elegant bathroom classic: **moderna plus** is a comprehensive high-quality bathroom range. The timeless and harmonious language of the forms gently takes this to a modern level. p. 106

A timeless classic, designed for the future: **palace** has become a versatile and comprehensive bathroom. palace is equally at home in private bathrooms and hotel bathrooms around the world. p. 122

Democratic design: **LAUFEN pro** applies the design principle less is more: elegant, functional and extremely flexible – as well as attractively priced. p. 146

Making the bathroom a living environment

The personality of this highly traditional Swiss brand reflects a symbiosis of design, quality and functionality. LAUFEN, the premium brand under the ROCA umbrella, is one of the world's leading manufacturers with a global distribution network.

The company's core competence is its knowledge in the area of sanitary ware manufacturing. Over 120 years, the LAUFEN brand has been using the oldest malleable material known to man to make innovative sanitary products in state-of-the-art plants with legendary

Swiss precision. Knowledge of the bathroom as a whole developed from the competence of LAUFEN in ceramics manufacturing, and sophisticated design. What makes LAUFEN products unique at the first glance is that their Swiss design unites two major design trends: emotional Italian design from the south and the northern tradition of design precision and clarity.

For LAUFEN, quality has two aspects: manufacturing knowledge and high degree of practical benefit that the finished bathroom affords the customer – which is often not immediately apparent. LAUFEN, a Swiss company manufacturing products that allow water, a precious resource, to be used sparingly, demonstrates in this manner a commitment to preserving natural resources and environmentally-friendly production.

From local foundations to a global player

When the company, LAUFEN, was founded in Switzerland in 1892, sanitary conditions were well below today's standards and level of convenience – standards to which LAUFEN, the only sanitary porcelain manufacturer producing exclusively in Europe, contributed. The history of some of the company's production sites goes back even further in time. Around 1878, the pioneer of the mechanised production of sanitary ceramics was a factory belonging to the Austrian monarchy. Not only tradition, but also the well-established situation of the various European manufacturing sites in their home markets of Switzerland, Austria and the Czech Republic, have helped lay the secure foundations of LAUFEN quality. The aim of LAUFEN back then and also today is to be a leader in technology, service and design. As early as the 1980s, the most efficient injection moulding technology in the field of ceramics processing was invented in Switzerland by LAUFEN, a breakthrough that constituted a lasting contribution to industrial production. Just as important for LAUFEN are the continuing developments in the field of design: Wall-mounted toilets and floorstanding washbasins, for instance, have made a new aesthetic possible. LAUFEN has now widened its expertise and its portfolio of sanitary ware, bathtubs, furniture and accessories by adding faucets to the product range. In 1854, Charles Kugler founded a small company for brass products in Lausanne. The first water and gas valves in Switzerland were produced here in 1863. Faucets have been manufactured at the Laufen site since 2009.

Global network with local service

LAUFEN has its headquarters in Laufen near Basel in Switzerland. There are four more production sites in Austria and the Czech Republic. Steeped in tradition yet ultra-modern; these production plants make over 3 million sanitary ware products annually and distribute these via a worldwide network of retail outlets and sales partners.

Since 1999, LAUFEN has been one of the world's largest bathroom manufacturers in the Spanish Roca Group, which has 20,000 employees in over 135 countries and produces 38 million ceramic products annually. Similor Group AG, one of the leading companies in the production of faucets with a manufacturing tradition which goes back more than 150 years, has belonged to the group since 2007.

Production sites in Central Europe

- 1 The company is named after the town of Laufen near Basel in Switzerland where it has produced washbasins, bidets and toilets in sanitary ceramic for 120 years. The management of LAUFEN Bathrooms AG, faucet production, training centre and the LAUFEN Forum are also located here.
- 2 The production facility in Gmunden specialises in the manufacture of highly sophisticated bathroom sanitary wares. The Gmunden facility has acquired this expertise through a long tradition in ceramics production.
- 3 The LAUFEN factory in Wilhelmsburg, Austria has a long tradition of ceramics manufacturing. A factory for English stoneware was founded here as early as 1795. Today, this state-of-the art factory practises the fine art of sanitary ware production.
- 4 The state-of-the art factory in Znojmo, in the Czech Republic, produces high quality bathroom sanitary wares. This factory has a long tradition which goes back more than 130 years.
- 5 Bechyně is not only the home of the oldest vocational school of ceramics in the Czech Republic, it is also an ultra-modern factory where high quality ceramics have been produced for more than 50 years.

The LAUFEN Forum

A powerfully symbolic building stands in the Laufen valley in the canton of Baselland: the LAUFEN Forum, an architectural statement that reflects the brand and is consecrated to the bathroom. Here, LAUFEN, the largest Swiss manufacturer of bathroom fittings and internationally renowned company, celebrates its product – which today is much more than just a sanitary ware; it is the bathroom as a complete package.

With the Forum, LAUFEN has created a new architectural setting for its products: it is a comprehensive architectural statement in concrete with the bathroom at its centre and acknowledges Switzerland unequivocally as the company's headquarters and production site. A space for the bathroom with the power to inspire clients, architects, retailers and tradesmen alike and provide a source of information.

This is also the home of the training centre of LAUFEN Bathrooms AG. A wide range of seminars is held here to train groups and communicate product knowledge. Training sessions also take place in the Sky Gallery in Wilhelmsburg, Austria, and in Znojmo in the Czech Republic.

LAUFEN won the "Award for Marketing + Architecture" in the category "Office and commercial buildings - industrial and commercial interiors" in 2010. It also won the Green Good Design Award and, in 2011, the "best architects award 2011" in the category "Business and Industrial Buildings".

Outstanding design

Although exquisite craftsmanship has always been a trademark of LAUFEN products, a great deal of thought goes into their design too. For several decades now, LAUFEN has had positive experience of the successful collaboration with outstanding architects and designers. In the development of new bathroom suite concepts, the expectations of the designer are met by the experience and precision of modellers, product developers and engineers. The shared objective: to shape the elegant materials as intelligently and pragmatically as possible while maximising their aesthetic appeal, minimising the impact on the environment while using resources as sparingly as possible. The company's product range is further enhanced by innovative material developments through the production of a near white porcelain body that allows smaller radii and a slimmer appearance. This interplay of creative design concepts and a precise manufacturing process using state-of-the-art technology facilitates an approach to the bathroom as an environment – an intelligent composition of the sum of its parts. The result: a highly functional and aesthetic product range. From ceramic sanitary ware, through to faucets, bathroom furniture and mirrors, to shower trays, bathtubs and whirl systems – in all price categories. At the same time, we use our knowledge and experience to achieve a high degree of individuality, in line with the wishes of our customers. As well as additional colours, surface finishes and motifs, made-to-measure washbasins that can be cut to the required size are possible, also with short delivery times.

Sustainable quality

LAUFEN manufactures products that allow water, a precious resource, to be used sparingly and therefore demonstrates its commitment to preserving natural resources. It therefore places priority on environmentally-friendly production, using energy and raw materials sparingly at all levels of production – from development to marketing. For example, LAUFEN reuses heat generated in the production process to dry the sanitary ware. In Austria, LAUFEN was awarded the "EMAS Environment Prize 2007" for its exemplary environmental management. The Swiss factory in Laufen has carried the label of the Swiss Energy Agency for Industry (EnAW) since 2006, which recognises it as a company which is actively committed to voluntary climate protection. LAUFEN also actively looks for environmentally-friendly solutions for many of its products. The high gloss surface finish of the mimo range of bathroom furniture, for example, is made of recycled PET material. LAUFEN, however, also places a great deal of emphasis on making products of outstanding quality – as numerous internationally-recognised product certificates and standards testify. The Swiss Q-Plus symbol certifies compliance of our products with the European standard and the established more exacting Swiss standard. This is an important aspect for LAUFEN, as only durable, low-wear products deserve to be called environmentally-friendly – after all, avoidance comes before recycling. LAUFEN thus helps customers to live in harmony with the environment and reduce energy costs. Our products therefore also feature the latest energy and water-saving technologies, such as the newest generation of water-saving WCs: several LAUFEN toilets flush using an optional 4.5 or 3 litres dual flush system as opposed to 6 or 3 litres conventional WCs. We also have particularly efficient urinals that require no more than 1 litre of water for flushing. For the public sector, we even have urinals with a special low-maintenance siphon: 0-litre solution. It goes without saying that, in the interests of sustainability, this catalogue is printed on FSC certified paper sourced from sustainable forest management.

LAUFEN's 4.5/3-litre toilets meet all functional requirements defined by international standards EN 997 Class 1 Type 5, EN 997 Class 2 and SAI/Wells 4 Stars.

Please take into consideration your local requirements which may vary from country to country.

Find further information on page 294.

The first two LAUFEN production facilities were successfully ISO 14001 certified and EMAS registered in 1997. Both of these factories were awarded the European Environment Prize 2007 for exemplary environmental management.

Since 1998, LAUFEN has continually monitored the use of resources in all its internal and external processes. Targeted measures and appropriate investments promote the efficient and sustainable use of manufacturing resources. Important key environmental protection indicators now clearly show that LAUFEN production sites fulfil the legally-prescribed environmental protection standards, and in most cases also exceed them.

Products with the Q-Plus certification meet both the European standard and the established more stringent Swiss suisselec/VSA standard. LAUFEN sanitary ware products meet these Swiss quality standards and have been recommended for approval accordingly.

One ILBAGNO **ALESSI**

Design: Stefano Giovannoni

LAUFEN expands its legendary design bathroom collection: ILBAGNOALESSI One. The new sanitary wares with their poetic language of form were penned by the prolific Italian designer, Stefano Giovannoni. ILBAGNOALESSI One includes not only the new characteristic and spectacular washbasins, but also an aesthetically-pleasing high-quality and functional range of furniture, a semi-recessed bathtub complete with bathtub furniture and, for the first time, a shower cabin.

The architect and designer, Stefano Giovannoni, born 1954 in La Spezia (Italy), lives and works in Milan. His work has received international acclaim. A number of his designs can be found in the permanent collections of the Centre Georges Pompidou in Paris and the Museum of Modern Art in New York. According to Alberto Alessi, the Managing Director of ALESSI, Giovannoni is one of the few designers who understand how to combine the unusual with the popular which is why he was commissioned to develop the first complete bathroom scenario for ALESSI.

This console furniture wraps round the ILBAGNOALESSI One bathtub like a precious stone. Models with long or short projections for practical seating and useful storage are available – as well as asymmetrical versions.

The finishes range from noce canaletto, the ultra-fine natural wood veneer, to white high-gloss lacquer with a quartz cover plate. It goes without saying of course that all surface finishes are not sensitive to water.

The half-height TamTam combines perfectly with freestanding or wall-mounted faucets on this washbasin console. The classy sanitary ware is available in white or warm gray.

DESIGN PLUS

An icon of contemporary design: By making the floorstanding TamTam even more elegant, LAUFEN has taken bathroom design to a new level. The faucets, mounted on the rim of the basin, wall-mounted or floorstanding, combine perfectly with the washbasin. Behind this lies exceptionally high degree of functionality: invisible overflow, concealed connection hoses, hidden mounting. Available in white or warm gray.

The playful slightly eccentric form of the washbasins is somewhat perplexing and stimulates the imagination without compromising the functionality. The wide variety of ILBAGNOALESSI One washbasins demonstrates that good design can take more than one shape. From the small washbasin to the countertop washbasins, the unmistakable character of the range is unmistakable. All washbasins have a concealed ceramic overflow system. The ceramic of the washbasins is finished with LAUFEN Clean Coat, making it particularly easy to clean.

XL in design and comfort: the new glass shower cabin has a 75 cm wide swing door and, its height of 212 cm provides full protection. The single-pane safety glass is eight millimetres thick, and is fixed and guided on chrome-plated metal fittings. The integral shower head has a concealed water feed – and also fixes

the structure. The ceramic shower tray is available with an optional non-slip coating for greater safety. A special system of tolerances allows straightforward height and width adjustment when installing the glass shower.

ILBAGNOALESSI dOt – a cooperation between Alessi, LAUFEN Bathrooms and Oras – is the first bathroom project of the designer, Wiel Arets.

In drawing up the design, Arets paid particular attention to ensuring that the individual objects did not distract from the real purpose of the bathroom – to cleanse the body and spirit. Wiel Arets: "The ensemble as a whole is based on the strengths of its individual parts. Each must fulfil its purpose without becoming overly dominant. All objects must, in all respects, serve the purpose of relaxation. The design of the forms is very low key yet consistent for all objects which means they project an overall impression of peace and tranquillity. On closer inspection, it can also be seen that their form perfectly follows their function.»

While the designs of the Dutch architect and designer Wiel Arets are undoubtedly based on intellectual concepts, they are also pragmatic. His most significant work includes the Academy of Art and Architecture in Maastricht and the AZL Pensions Fund Headquarters in Heerlen, Netherlands.

Wiel Arets was born in 1955 in Heerlen and received his diploma from the Technical University of Eindhoven in 1983. In 1984, he founded the office Wiel Arets Architect & Associates in Heerlen, which subsequently moved to Maastricht in 1996. He has lectured all over the world at academies and universities in London, Vienna and New York and other cities. He currently holds the Berlage professorship at the Technical University of Delft.

Formal and minimalistic: this is the impression created by the elements of ILBAGNOLESSI dOt. The unifying key element is the circle – even if this is not always obvious. The highly minimalist design with closed form and low-key elegance radiates an air of tranquillity.

The bevelled form lends the ceramic body a playful lightness yet also an air of serenity.

PALOMBA COLLECTION

Design: Ludovica+Roberto Palomba

With the introduction of the successful Laufen PALOMBA COLLECTION in 2005 the famous Italian designers Ludovica and Roberto Palomba created a design language that the couple describe as a "fingerprint of nature". The tension between rigorous geometrical and organic shapes is typical of the entire collection, and ensures that all elements can be combined with one another. If recent editions have favoured geometrical shapes, this time round the Milanese designers are again focusing more on soft organic lines. The highlights of the PALOMBA COLLECTION 2012 edition are the "Menhir" washbasin and an exceptional bathtub. These two leading protagonists are accompanied by a cast of four new countertop washbasins, two washbasin bowls and a new bathroom furniture collection.

The two new asymmetrical washbasin bowls in the PALOMBA COLLECTION 2012 are also organic by nature. The 520 x 380 mm bowl is suitable for freestanding faucets and wall outlets with no faucet ledge of their own. On the other hand, the 600 x 400 mm bowl has a faucet ledge, and can thus accommodate a standard faucet.

LAUFEN extends its range of washbasins introduced in previous editions of the collection by four countertop washbasins in 50, 65, 80 and 100 cm lengths. An organically shaped bowl blends lagoon-like into the ultra-flat washbasin panel. The central position of the bowl leaves ample storage space at either side.

To match the ceramic washbasin LAUFEN has created a new bathroom furniture series for the PALOMBA COLLECTION 2012. It includes vanity units whose handles and bases can be optionally selected with atmospheric LED lighting, a tall cabinet, medium cabinet and washtops

The PALOMBA COLLECTION offers endless creative possibilities as many of the objects can be combined. LAUFEN has set itself the task of continuously adding new design solutions to the PALOMBA COLLECTION. The versatile design tonalities give architects, interior decorators and designers a wide selection of current superior quality products at their disposal in the planning of bathrooms thus offering them a big opportunity: to break free from all clichés and have full design freedom.

Innovative axialities: organic decisive lines for a large washbasin that characterize and shape the entire range of architectural objects. A unique product in the world of sanitary wares which poses a real challenge to the laws of production. This iconic 1600 mm washbasin is also available in widths of 1200 mm and 800 mm. Together with the asymmetric washbasin bowl, this washbasin won the coveted red dot design award.

The bathroom is also architecture. This room can become a real part of the home by devising new bathtub, washbasin, WC, bidet and furniture configurations. The WC and bidet in white ceramic are available as a floorstanding bidet/WC, wall-hung bidet/WC and WC with cistern. The toilet seat has a lowering system. The new WC seat with ultra-flat cover is a further development. It fits existing stylish WC versions.

The dynamic asymmetrical geometry and high back of the new freestanding bathtub recalls a natural water basin washed out of the rocks over the millennia. These natural lines moulded to the contours of the body also promise bathing enjoyment which can be intensified by light and whirl massage functions.

Symmetrical bathtubs are available as freestanding or built-in versions with 40 mm or 200 mm borders. A built-in version of the large asymmetrical bathtub with extremely flat 20 mm and 80 mm border is available. Owing to its form and generous dimensions, it is reminiscent of a small lake in which you can immerse yourself, relax and renew your energy.

Design: frog design, Hartmut Esslinger

The mylife range, designed by frog design, speaks a clear, timeless and unified design language and harmonises with the widest range of materials and architectural styles. Hartmut Esslinger was one of the first to recognise that an industrialized society needs more than just functionality – and, with the formula "form follows emotion", has put his unmistakable signature on countless consumer goods. This pioneer of German industrial design studied at the University of Design in Schwäbisch Gmünd and founded the company Esslinger Design in Altensteig in 1969, which subsequently became frog design in 1982. The company is now one of the most internationally renowned design agencies with head office in Silicon Valley, California.

The centre of well-being is the generously dimensioned symmetrical bathtub. It is available as a built-in or freestanding tub with L or C-panel and with whirl system. WCs and bidets are available as floorstanding or wall-hung models, a unique floorstanding WC combination is also available.

The mylife washbasins have a timeless sophisticated appearance. The basic form – an outwardly bowed rectangle – conveys calmness and tranquillity. mylife has a washbasin for every task. They come not only in different sizes but also as washbasin bowls, built-in washbasins and small washbasins.

For detailed information on the whirl systems, refer to the chapter "Wellness".

A system with corners and edges, yet so flexible and easy to maintain: living city has a clear concept and clear forms. Thanks to the modular system, washbasins with and without storage are available in many widths. Reduction, not stone cold sobriety; individualism without idiosyncrasy: The language of the living city forms is aimed at people who live in modern surroundings and create a living environment with refined awareness and sensitivity to materials. The design of LAUFEN rectangular wall-hung WCs and bidets suits this context perfectly.

Urbane and modern: living city demonstrates a bold tendency towards reduction and interprets sanitary ware as a cube. This bathroom design is characterised by a clear line and aesthetic sophistication. Pure geometry: The sanitary ware products of living city speak a clear formal language are a celebration of modern lines – and are also eye-catching in combination with the matching city line, citypro and cityprime faucets. Case, the bathroom furniture series, is the perfect complement and provides more storage space for all living city washbasins (see chapter "case").

Individual touch: The ceramic shelf of the living city asymmetrical washbasins can be customised using eight different decors. Decoration can also be applied to smaller quantities of these washbasins according to individual requirements (more details are provided later on this chapter).

living square pushes the art of ceramic manufacturing to its limits. The extremely flat washbasin, with its flat surfaces and defined edges, appears to float in front of the wall. This is how elegant sanitary ware can be.

living square inspires with its slender outline: The double washbasin, with a useful width of 180 cm in combination with the ceramic shelf, creates a fully functional washing facility. The case range of furniture is equally well matched (for more information see the chapter "case").

Different configurations are possible for the living square washbasin: traditional wall mounting; incorporated in a furniture unit; as a back-to-wall washbasin bowl; recessed into the top of a countertop or with additional practical towel holder.

The living square washbasins are cuttable and can be trimmed to almost any requirement: on the right, left or at both ends. Thanks to precision engineering, they can be cut in our factory to within a millimetre of customer specifications. This means we can produce tailor-made solutions that fit perfectly into niches and corners.

living square can demonstrate its qualities in hotels too: with useful accessories such as an integrated towel holder or open vanity unit with tissue box. The furniture unit, available in many surface finishes, emphasises the filigree line of the sanitary ware and can also be used in this case to provide accents in black.

Aesthetic perfection, from every angle: this washbasin – single or double version – celebrates the lightness of being. A classic that brings together design and sanitary ware competence. Perfect presentation – great benefits: The essential characteristics of the elegant case for living style vanity units are doors framed in aluminium and metal handles.

Greetings from the avant-garde: living style is a washbasin that consistently emphasises the horizontal – from sanitary ware through to the towel rail and typical mirror set. To match: bathroom furniture in the case series (for more information see the chapter "case").

WC & bidet

Round or square: The WC and bidet models in the living series leave nothing to be desired. Hygienic LCC special glaze, WC seats with lowering system and always with economy-flush capability.

Bathtubs & shower trays

Matching bathtubs & shower trays perfectly compliment the living models. The sanitary acrylic is hygienic and gentle on the skin which means the pleasure of a relaxing bath or shower can be long-lasting.

Individual touch: the ceramic shelf can be modified according to individual requirements using different decors or designed according to personal requirements in smaller quantities.

Life's too short for one style only. Being at home is much more stimulating than the finely decorated rooms in the glossy magazines would have you believe. And what's more: A home is not a snapshot of a moment but reflects the diversity of the householder's experiences, ideas and accumulated possessions. LAUFEN has the bathroom concept for living: Lb3. No off-the-shelf style please! Life is full of choices – and we can also choose how we bathe. With Lb3, LAUFEN offers the freedom to continually reconfigure your environment.

The Milan architects, Ludovica+Roberto Palomba, researched living "in the here and now" for a whole year – in many large cities of the world. The insights are fascinating and have been implemented in Lb3. Down with the dictates of style – long live free interpretation and improvisation! With the modern, classic and design versions Lb3 provides the right platform for this.

Lb³
modern
classic
design

reddot design award
winner 2010

Perfect combination with contemporary furnishings: Lb3 classic is the formal language of the middle-class living environments of the 19th century – adapted to the present day and uncapricious. The double contour lends the washbasin a timelessly elegant and light appearance. As washbasin with pedestal or siphon cover, as cuttable countertop washbasin or as built-in washbasin – Lb3 classic offers a wide selection that gives you ultimate flexibility when choosing your fixtures and fittings. This range offers a nod to the past – yet is still highly contemporary in terms of its design: furniture in white, oak or wenge. For wall-mounting or flexible installation on chrome-plated metal feet. Tall cabinets with glass shelves can store a great deal ensure the bathroom stays tidy. Perfection down to the last detail: The accessories are perfectly matched to the design of the three Lb3 versions and have sophisticated chrome fittings.

Modernism is the major design movement of the 20th century. Lb3 modern quotes it playfully and impartially. Modern is not a creed or world-view, it is simply good form and good functionality. Chrome-plated washbasin supports for asymmetric washbasins provide a high level of transparency and quick access to washing items. Compact vanity units in the colours, white, oak or wenge, are ideal supports for the uncompromisingly elegant washbasins and are available in many shapes and sizes.

The wash station can be installed as pure-grade ceramic solution with pedestal or siphon cover or the ceramic can be combined with fine wood. Whatever the choice of material, washbasins in the Lb3 modern range are available in many different widths, from the small washbasin to the cuttable countertop washbasin with generous shelf spaces. Thanks to the concealed ceramic overflow system, the Lb3 sanitary ware has no overflow hole – which enhances its aesthetic appeal and makes it extremely hygienic.

Remarkably flat: The shower tray in sanitary acrylic has more or less no border. It is only 15 mm deep – optimum for solutions that are either installed flat on top of the floor or are recessed flush with the floor. Lb3 shower trays and Lb3 bathtubs have a concealed drain: this not only makes them comfortable to stand and sit in, but also easy to clean.

With this is the starting point, Lb3 design offers a vanity unit concept that is new and inspired. It demonstrates an internationally recognised understanding for design that cannot be categorised – except as good taste. Discrete handles on the drawers provide access to the storage space of the vanity units. As an option, the furniture units can be mounted on feet, or can be wall-mounted. And since, in every bathroom, many items need to be put away or made readily accessible, LAUFEN offers a range of accessories with fine chrome finish that perfectly matches the three Lb3 versions.

Lb3 bathtubs, made of high quality sanitary acrylic, are available as fitted or free-standing tubs with panels in natural wood veneer (white, oak, wenge). There are also practical details such as a step-in aid with rail, an innovative self-adhesive and waterproof gel pillow and the faucet bank integrated into the edge of the tub. The bathtubs are suitable for all three Lb3 design versions and are of course also available with whirl system.

Lb³ comfort

Whether floorstanding or wall-hung, whether with face mounted or recessed cistern: the Lb3 WC and bidet range is convincing due to its variety – with or without lowering system. In the classic variant, the double contour is applied to the WC lid, and is kept simple in the modern and design versions. The WC and bidet sanitary ware range is the same for all Lb3 versions. Many convincing practical details: bidet overflow without overflow hole and concealed fixings for WC and bidet.

Lb3 Comfort WCs – for greater comfort: The seat position is 6 cm higher which makes it considerably easier to sit down, allows a more ergonomic sitting position and lets you stand up more easily. It fits existing connections, which makes replacement clean and easy.

- seating position raised by 6 cm for more comfort
- knee angle of about 90° for ergonomic sitting position and ease of sitting and standing
- easy installation due to standard fixing dimensions (e.g. for renovation)

Inspired by the Weimar Bauhaus style, the designers at Phoenix Design have created the form bathroom collection using the values and aesthetic sense of the classic modern style. Simple forms, highest quality materials and careful workmanship bring harmony and concentrated peace to your bathroom. "Less is more": this expression does not just indicate a commitment to tasteful form, but also relates to a demand for affordable quality.

The harmony of a room depends on the size and proportions of its furniture and fittings. For this reason, the various washbasins in the form range do not just differ in size. Depending on the model, they may also be cut, allowing them to be integrated to millimetre precision into your room concept. And our bathtubs

also fit into the harmony of the whole. They are available as a wall or fitted version, or even as a right or left corner solution. The case/case plus range is available to match the form bathroom range.

mimo – the bold bathroom.
This Phoenix Design concept breaks with the tradition of corners and edges. From sanitary ware to furniture and faucets, mimo is a bathroom design that reflects an urbane style of living. With its freshness, colour and wit, mimo will make any small bathroom look great. mimo washbasins are sensual objects that put you in good spirits; they are available in many colours and sizes. The ceramic elements can be in white, fashionable pink or elegant black and bold combinations are also possible. Ceramic shelves in two sizes and three colours give refreshing accents. This is also true for mimo matching curtains, for which a high-quality bathtub curtain rail is also available.

reddot design award
winner 2009

No matter what the measurements of your bathroom are, our rich selection of washbasins will provide you with the ideal solution. Freestanding or wall-mounted WCs and bidets, the attractive and unusually deep bathtub and refreshing forms of the faucets are brimming with ideas and never allow a dull moment.

White, pink and black: The mimo basic colours feature in the sanitary ware and ornaments. They work equally well on their own or in combination with a second colour. For example, you might have a washbasin with a pedestal or siphon cover in another colour.

The vanity units, as well as the medium and tall cabinets are available in six attractive mimo colour combinations. Large surface but without corners or edges: mimo mirrors in three sizes with or without lighting and a mirror cabinet with double mirror doors and glass shelves are all a departure from the conventional.

Perfection in the tightest of spaces: The mimo bathtub needs very little space (1400 x 800 mm), you also maximises space. The unusual depth of the tub (580 mm) is unparalleled.

The round vanity units, which are wall-mounted and have high-quality, scratch-resistant surfaces made of PET are available in white or black; the rectangular furniture is available in four colours with mimo ornamentation, or also entirely in white or black. Details, such as the gently closing doors, are also equally well thought out, as is the concealed siphon outlet for the washbasins.

The mimo capacity to combine extends to white bathtubs with panels in either white or black – mimo provides alternatives. The mimo bathroom is complimented by a corresponding range of faucets. For more see the chapter "mimo" in the "Faucets" section.

The central form of moderna plus is the trapezium and was developed by Peter Wirz at Process. The company, which has won many awards for its work and has offices in Zurich, Lucerne and Taipei, specialises in product design and has already collaborated several times with LAUFEN.

The matching furniture comes from the product design studio Polka in Vienna. Monica Singer and Marie Rahm at Polka celebrate the beauty that is inherent in everyday life, and thus surprise the observer, with unusual perspectives. In addition to its own work, Polka carries out projects for other internationally renowned firms.

Harmony as a concept. moderna plus is a high quality comprehensive range. All the individual parts combine to form an aesthetically and functionally pleasing whole. The range includes sanitary ware, matching furniture, bathtubs and shower trays, as well as practical ceramic shelving which achieves a harmonious and homogenous installation.

The basic geometric form of the trapezium is a stylistic and functional element which remains constant throughout the entire collection. The clear language of the moderna plus washbasin forms, and their varying sizes means they can easily be combined. This means that, whatever the requirement, an appropriate solution can always be found.

Furthermore, since a personality can grow and develop, units can easily be replaced and adapted to the new circumstances.

Inner values. The furniture, whose outward appearance is deliberately plain with easy to maintain surfaces, is convincing due to the sophistication of its inner workings. This can be fully adapted to the user's personal requirements. The generous, individually divisible pull-outs make ensure clarity of overview and provide easy access. In some models, an interior drawer option is available to allow the space to be used even more effectively. With "soft close technology" all pull-outs close gently and securely more or less automatically.

A timeless classic, conceived with the future in mind: palace has developed into a complete multi-faceted bathroom solution. But its speciality remains: To provide cuttable washbasins tailored to the measurements of any bathroom.

Palace's designer, Andreas Dimitriadis of platinumdesign, has put together a bathroom range that is as suitable for the private home as it is for the hotel bathrooms of the world. It is a homage to the ceramic material, taking advantage of its strengths in both applications.

The new series of bathroom furniture in the case range perfectly matches the palace range (for more information, see the chapter "case" under in "Bathroom furniture" section).

reddot design award
winner 2011

A number of handy details make palace the ideal bathroom solution. For example: An optional soap dispenser on the washbasin. A hygienic solution, also suitable for the private bathroom. Or the open storage areas provided by the easy-to-clean ceramic shelf under the washbasin.

The large palace washbasins (from a length of 120 cm) can be ordered made-to-measure from our factory. Thanks to our innovative production engineering, our sanitary ware fits precisely into bathroom plans. The sanitary ware can be cut, also diagonally. Freestanding side components can also be manufactured to precise measurements without having to add on side panels with visible joints.

Whether wall-mounted or freestanding – the range of palace WC and bidet models covers all applications. Ingenious: An ergonomic form with concealed mountings. An optional WC seat with lowering system is also available.

LAUFEN has extended its successful LAUFEN pro bathroom range, and updated its design. It has enhanced this already comprehensive bathroom range, which offers the ideal solution for every spatial situation and requirement and also reflects the building values of the current generation. Industrial design is the modern answer to the once revolutionary idea that everyone has a right to enjoy beautiful forms. Good design is now no longer a right reserved for the most affluent customers. Modern methods of industrial production and designers such as Peter Wirz of Process, who put optimum manufacturing feasibility at the forefront of their creative processes, make such sanitary ware ranges as LAUFEN pro possible. This does not just benefit the designer, more importantly, it also benefits the customer.

LAUFEN pro A

LAUFEN pro B

The notion that good design has to be expensive is still widely held. The names of well-known designers may keep prices high. Or it may be the small numbers produced. That is why with LAUFEN pro we concentrate on industrial design. We concentrate on good design that ensures the best possible functionality using the simplest possible forms. LAUFEN pro washbasins are perfect examples of the extent to which design has been democratised.

1. Rectangular washbasin bowl
2. Compact washbasin bowl with tap bank
3. Drop-in washbasin
4. Oval washbasin bowl
5. Round washbasin bowl
6. Rectangular built-in washbasin, without tap bank
7. Round built-in washbasin, without tap bank

The clean, timeless design of the LAUFEN pro furniture set provides a neat and tidy atmosphere, a clear overview and plenty of storage space in your bathroom. One design and functional feature that is common to all this furniture is an integrated handle which does not project and provides more space in front of the washbasin.

The LAUFEN pro undercounter furniture is equipped with a special space-saving siphon. This dispenses with the need for siphon cut-outs in drawers and increases valuable storage space – exclusive to LAUFEN. The integrated soft close mechanism and high-quality fittings ensure that the doors close gently and silently on a lasting basis.

Comfort down to the last detail: The flexible 3D mounting system makes it easy to mount LAUFEN pro furniture on the wall. Adjustable aluminium feet provide additional stability if required. In addition, a practical side towel holder can be installed quickly and easily via the concealed pre-drilled holes.

If space is scarce, good ideas are required. LAUFEN pro compact solutions give you the opportunity to devise a comprehensive design concept, even in the most restricted spaces. Our washbasins and WCs have a short spout reach which saves valuable space.

WC & Bidet

The WCs and bidets in the LAUFEN pro range are suitable for all applications – most of which are equipped with an economical 4.5/3-litre flushing system. Especially aesthetic: the new wall-hung WCs and bidets with concealed fixings.

Wall-hung WC and bidet with 560 mm spout reach. Universal WC paper and brush holders in ceramic are also available.

Compact mass, maximum comfort: WC with 490 mm projection.

Back-to-wall and floorstanding WC and bidet.

Renovation-friendly WC with comfort and normal sitting position and vertical outlet.

Back-to-wall floorstanding WC combination with new universal seat and cover.

Renovation-friendly WC with comfort and normal sitting position and horizontal outlet.

Bathtubs

Clean cut, traditional forms have a special appeal: and this is the case too with LAUFEN pro. Based on rectangular geometric forms, the design brings maximum functionality and a clean cut appearance to the bathroom. The bathtubs in the LAUFEN pro range are available in white or pergamon, in five sizes and also with whirl system.

case

It's hard to believe that we spend a large proportion of our lives in the bathroom. And for precisely this reason the bathroom, a place where we retreat to relax and take some time out of the daily grind to recharge our batteries, needs to have a special atmosphere. The harmonious bathroom furniture in the case range meets the highest aesthetic and functional standards – which means you savour those valuable moments in the bathroom all the more intensely. Compact, functional design is the main success factor in both collections. Both case and case plus can be combined with many LAUFEN sanitary ware ranges. The rigorous straightforward forms bring out the best in any sanitary ware.

Timeless yet contemporary – case fits in almost any environment. The white scratch-resistant surfaces or contemporary wood structure surfaces of this continuously updated classic make it a compelling choice.

The new case furniture range features a high-quality storage concept, suitable for combination with the living square range, among others – and which also represents extremely good value for money. Its ability to make the bathroom neat and tidy at all times is good for both mind and body. One of many technical refinements is the newly developed space-saving siphon which dispenses with the need to make siphon cut-outs which means all the space in the vanity unit can be used without restriction.

The case vanity unit, used here in combination with palace, can hold a great deal behind its soft closing doors and in its fully extendable drawers. Optional: one or two drawers.

Special details in a cubist form: The washbasins in the living city range are particularly suitable for flush integration of the furniture.

case 1800 mm washbasin with integrated 900 mm chest of drawers and washbasin bowl from the Palomba collection.

case 1600 mm washbasin countertop with 800 mm undercounter drawer unit and 650 mm living square drop-in washbasin.

Compact 600 mm washbasin furniture, with two drawers and 450 mm living city washbasin bowl.

Washing space solution using Palomba washbasin bowls on a 1800 mm wide furniture combination in anthracite oak.

The new case range works with a wide variety of LAUFEN bathroom ranges. A bathroom furniture concept offering impressive value for money.

Above:
Elegant white washing station solution with medium cabinet and 900 mm washbasin countertop with matching drawer element.

Right:
Pro built-in washbasin with a 900 mm countertop and additional roller container, which can be used for storage and as somewhere to sit.

Special design and plenty of storage space are not necessarily mutually exclusive – mimo washbasin with a width of 600 mm with matching undercounter furniture and two large tall cabinets.

Timelessly elegant and compact – case combined with a small 450 mm palace washbasin.

Emphasises the classic elegant line of the form washbasins – case with additional medium cabinet.

Unconventional yet functional – the mimo double washbasin with case vanity unit.

If you need more storage space in your bathroom, case cabinets offer the best value for money. There are two different versions available to help you stow your bathroom utensils tidily out of sight. The comfort features of the cabinets include surface-mounted handles and glass shelving.

Their exceptionally scratch, water and UV-resistant, easy-to-clean surfaces are available in three colours; white, chalked oak and anthracite oak – on request, we can deliver 38 other painted surface colours.

Wall mounting is simple and easy thanks to our flexibly adjustable 3D installation system.

The case mirror collection goes perfectly with LAUFEN furniture and washbasins. The mirrors in minimalist, timeless design are available in two different sizes and lighting schemes.

The mirror is backlit indirectly via the wall, giving the bathroom a relaxed atmosphere. At the front, lighting elements light up the face perfectly when applying make-up or when shaving. The superb price-performance ratio of case mirrors makes them an attractive solution for both private and public projects.

The scratch-resistant and easy-to-clean glass shelves with chamfered edges provide ample space for important items.

Decor: anthracite oak

Decor: chalked oak

Colour: white matt

Mirror with horizontal lighting.

Especially good illumination thanks to two vertical lamps.

Practical cabinet mirror with lamp mounted on top.

Mirrors can be made to measure on request.

For other mirrors and cabinet mirrors, see the chapter "case plus".

Lightness and refinement – case plus bathroom furniture satisfies both the highest aesthetic and functional demands – and provides the tidiness and clarity of overview you need to relax in your bathroom.

case plus is available with scratch-resistant high-gloss finishes in white, black or elegant noce canaletto real oak veneer. The doors made of white or black lacquered safety glass in a refined anodised aluminium frame combine lightness with elegance.

Wellness

Bathtubs, shower trays, whirl systems

LAUFEN bathtubs and shower trays have been designed for people who see their home as a place to unwind and recover. From the classic bathtub through to models with complex whirl systems, the quality and workmanship is first class. The tubs are made of high-quality materials, from the best suppliers in the world. Almost all LAUFEN bathroom concepts have a suitable bathtub as part of their range, which comes in many shapes and forms. LAUFEN also offers many bathtub and shower tray solutions that are not associated with any particular design concept and can therefore be easily combined with existing sanitary wares.

Our name, our promise: LAUFEN solutions. There should be no limits when it comes to feeling good which is why LAUFEN has a bath and shower range with the ideal format for any spatial situation. After all, bathroom spaces are as diverse and varied as the people who spend time in them. They offer rest and relaxation in the widest possible variety of floor plans and sizes. Sometimes geometrical and practical, sometimes with plenty of nooks and crannies and bags of atmosphere. In other words, the perfect spaces for LAUFEN solutions.

Sometimes every centimetre counts in the bathroom. A hexagonal tub or shower tray which fits cleverly in the corner, for example, frees up more space.

This is why a wide range of shapes and sizes of shower tray are required in order to find an especially good solution for a particular spatial situation.

LAUFEN solutions is a high-quality set of tubs and trays. Our tubs and trays are made of the highest quality sanitary acrylic and have been carefully polished and quality-tested. LAUFEN solutions bathtubs also come with a variety of whirl systems.

Underwater massage combines the life-giving power of water and air to lift your feeling of wellbeing. This is what LAUFEN promises to deliver with its top-quality bathtubs.

The unique LAUFEN air massage system, which features up to 90 air nozzles in the base of your bathtub, is exceptionally effective and comfortable. Thanks to the large number of apertures, the entire body is massaged evenly with ozone treated warm air which enters the water through air conduits under the floor of the tub.

The metal nozzles do not project beyond the base of the tub. The intensity of the air massage can be controlled steplessly up to 100% by touching the sensor on the rim of the bathtub with a finger and holding it there. To reduce the intensity, touch the sensor again. The air massage system is self-drying and therefore extremely hygienic and easy to maintain.

Depending on the model, your bath may feature between 10 and 14 massage water nozzles. There are six water nozzles at the sides of the bathtub. Their direction and intensity can be changed either via a touch sensor or manually. Rotary micro-nozzles are installed in the back and foot areas of the bathtub and can be varied in intensity.

The LED underwater lighting appeals to all senses. The colours of the LED coloured lights change continuously, one colour can also be selected via the sensor control system if required.

Some bathtubs have an electronic system control which features a highly effective automatic disinfection system.

In addition, premium models feature a water heating system, which keeps your bath water temperature constant while the water massage function is in operation. This function is especially convenient, particularly for large bathtubs in which the water cools quickly.

In contrast to the control systems in standard whirl systems, our touch sensors are recessed flush into the rim of the bathtub – this is not just simple and ingenious, it also enhances safety and is scratch-resistant, hygienic and easy to clean and also does not detract from the aesthetic appearance of the bathtub.

- 1 Air massage system
- 2 Water nozzles, adjustable
- 3 Micro-nozzles
- 4 Rotating foot nozzles

Option 057	x	x	x	x	x	x	x

With its new remote control system, LAUFEN ensures additional comfort in its top-of-the-range bathtubs. The waterproof casing of a media player has a sophisticated design and conceals state-of-the-art technology: As well as the whirl system control, the equipment also includes an MP3 player, a radio and an amplifier which is integrated into the tub.

The straightforward user guidance with control buttons and screen gives the user full access to all functions of the whirl system who can, for example, run predefined relaxation programs which combine wellness applications and music, and also create customised programs. There is also a new function that controls a chrome-plated, LED-lit outlet, which spreads a mist over the surface of the water.

The remote controlled music functions can both be seen and heard: The integrated MP3 player has 2 GB of memory for favourite tracks, which can be played via headphones or a powerful 4.1 sound system with four 30 watt loudspeakers and a 100 watt subwoofer. Music can also be played by external devices either wirelessly via a Bluetooth 2.0 connection or via USB cable. A practical function when relaxing in the bath: A quick-selection button provides instant access to your music collection or radio.

The remote control is kept on the rim of the bathtub, where hidden magnets hold it firmly in place.

merano

Ceramic shower trays

Our modern shower trays are made of sanitary ceramic and fit harmoniously into your bathroom. Like all ceramic products, they are characterised by their aesthetic appearance and durability of the material. Our attractively formed shower trays offer a conveniently low step-in height of 6.5 cm and come with an antislip surface on request. Antislip has been tested against the German industrial standard DIN 51097 and offers a higher than average antislip performance. Antislip is a surface treatment which is applied prior to glazing and firing and is therefore perfectly integrated into the ceramic structure. The surface offers a secure grip and is easy to clean, resistant to acids and scratch-resistant. This antislip treatment also does not adversely affect the glaze as it becomes part of the glaze which gives it long-lasting properties. merano shower trays are also available glazed on four sides.

Steel tubs

Our steel and enamel bathtubs and shower trays are created from natural, recyclable materials. The durable baked enamel surfaces are clean and hygienic, acid resistant and impact and abrasion-proof. LAUFEN steel tubs made of heavy 3 and 3.5 mm enamel steel are extremely dimensionally stable and timelessly beautiful. In addition, they include in-built sound insulation.

With their geometric and pared-down, harmonious forms, talux washbasins are a refreshing move away from short-lived fashionable trends. Flat ceramic surfaces contrast harmoniously with the curves of the basins themselves. This is timeless elegance that is part and parcel of a modern lifestyle. Durability and functionality, efficient maintenance and an excellent price-performance ratio also make talux the first choice for the municipal sector.

Washbasin bowls

The original washbasin. What was once effectively a portable water container now provides elegant highlights in the bathroom. The washbasin bowl embodies a timeless chapter in bathroom history. More and more designers are now combining the light appearance of the washbasin bowl with suitable vanity units, which restores a great deal of authenticity to the bathroom.

The recessed washbasins project out from a slender, space-saving countertop. In hotel bathrooms, and wherever space is limited, semi-recessed washbasins are an elegant solution that allow greater freedom of movement.

Drop-in washbasin

The ceramic basin is lowered from above into the cut-out in the washbasin countertop. In contrast to washbasin bowls, the underside is not ground flat, as the washbasin is not supported at the bottom. Bathrooms can be designed to individual requirements using a combination of countertops and bowls with a wide variety of forms and colours.

Urinals: home

The requirements are by no means the same for all applications which is why LAUFEN urinals are available for public and private uses. While urinals for the "public" area are designed to satisfy high installation and functional standards, urinals for the "home" area are impressive due to their high aesthetic standard. Urinals in the "home" area are ideal for private use. Their harmonious form gives your bathroom a very special atmosphere.

Urinals: public

LAUFEN urinals for "public" sector can be seen in a wide variety of public places. Whether it be in the catering sector (restaurants, bars and hotels), busy transport nodes such as stations and airports, the business sector, municipal buildings such as schools and congress centres, or shopping centres, cinemas, theatres or concert halls – the scope of applications for these urinals, most of which are equipped with electronic flushing, is practically unlimited.

Program 1:

STANDARD (default setting)
Flushes one litre after every usage

Program 2:

VARIO – environmentally friendly

The amount of water flushed is calculated according to the frequency of use. If this is often, the quantity of water flushed is reduced to 0.8 l. This is ideal for hotels, service stations, trade fair venues, airports and other public areas and buildings.

Program 3:

Water saving mode – waterless operation with cleaning function

Does not flush after use. A main flush using three litres occurs 15 minutes after initial use in order to clean the urinal. This particularly suitable for venues such as stadiums, concert halls or schools, where use is intensive at certain times, at intervals or before and after an event, for example.

With siphon

Options: *.400 = with fly

Lema 1 litre urinal saves water
and money.

LAUFEN presents an innovation:
urinals that are set to revolutionise
the upkeep and maintenance of
public sanitary facilities. Up till now,
urinals often had to be completely
disassembled when replacing their
siphons.

Lema allows you to release the
siphon easily using a special key
and lift it out. In contrast to standard
urinals, Lema is characterised by its
excellent efficiency, as it requires less
cleaning effort and saves an incred-
ible amount of water.

The siphon on the Lema 1 litre urinal
can be changed easily, quickly and
economically:

1. Remove cover by hand.
2. Lift siphon up and out
using special key.
3. Clean urinal and rinse pipes.
4. Insert the new siphon.
5. Replace sieve.

The Lema 1 litre urinal is available
with an electronic control system
(battery or 230 V power supply). If a
user remains at least 8 seconds in
front of the urinal, an infrared sensor
detects this and the urinal flushes
once the person leaves. If the urinal
is not used, it flushes once automati-
cally every 24 hours. The monitoring
system is integrated into the urinal as
is easy to maintain and vandal-proof.

Lema waterless urinal with siphon

Options: *.400 = with fly

Lema 0-litre urinal saves water and
money.

LAUFEN presents the innovative
Lema 0-litre urinal. It operates with-
out water and does not require a
water shut-off device or electricity to
keep the drain closed. The urine itself
helps to keep gases sealed in and to
prevent their escape. The principle
behind this "trap" is known in the
chemical industry as the Erlenmeyer
flask.

The rate of evaporation of the urine
in the "trap" is extremely low. Even if
the urinal has not been used in a
long time, very little odour is emitted.
The small amount of air that escapes
passes a citrus aroma-scented block.
The 0-litre urinal should be cleaned
regularly with water at intervals that
depend on the frequency of usage.
The water can flow off directly via the
existing drain.

The siphon in the 0-litre model can
be replaced just as easily as the
siphon in the 1 litre urinal.

No matter whether Lema is used
with a 1-litre or 0-litre siphon, the
potential savings compared to the
standard two-litre urinals are enor-
mous. At a rate of 300 flushes per
day, it is possible to save the amount
a family of four would consume in
nearly three years when using 5
Lema 1-litre urinals. With the Lema
0-litre urinal, the saving is almost six
years worth of water.

Eco-friendly urinal for prestigious washroom facilities: With its new antero urinal designed LAUFEN offers outstanding design and meticulous well-conceived functions to create prestigious washroom facilities for guests, customers and staff. This masterly combination in the product design of the two qualities, form and function, the urinal has already earned the Red Dot Award 2012. The outstanding design has been developed by Toan Nguyen.

reddot design award
winner 2012

The harmonious tension between geometrical outer and organic inner contours creates an emblematic product image. In contrast to conventional urinals, the ceramic body of antero is shaped neither like a cone nor a cylinder. Instead the bowl rises organically towards the user out of a 380 x 765 mm rectangular ceramic surface. The flat rear wall fits standard connections and neatly conceals traces of previous installations during modernization. The sloped ceramic surface and deep bowl tapered at the front guarantee backsplash protection and a clean outlet. The patented LAUFEN flush system cleans the entire urinal with less than 1L of water. The smart hybrid control is equipped with various modes and triggers cleaning either according to type of usage or at fixed intervals with varying flush volumes from 0.5 to 3 liters. An integrated overflow protection provides additional safety in the event of the outlet being clogged. Architectural scenarios in washrooms are thus possible, particularly when combined with the new matching urinal division cinto.

Faucets

curveprime

Water for the senses: The defining characteristic of curveprime is its elegant bow-shaped outlet, a sensuous interpretation of the flow of water. This comes with a stream shaper, or alternatively a natural water flow with the curveprime open version. Available as a single-lever mixing unit, dual-handle faucet or three-hole version.

The bathtub faucets in the curveprime range radiate perfection and dynamism. Whether you choose the version for the wall or bath rim – the ranges are comprehensive, and even have a matching handspray.

Why do we love the classics?
Because they are simply good.
With the new extension of the
faucet line twinprime LAUFEN is
strengthening the successful
series with one two-lever and
one three-hole washbasin mixer
with a curved outlet, and one
concealed washbasin mixer.

A two-lever bidet mixer and four-
or fivehole bathtub filling combi-
nation have also been added to
the twinprime faucet line.

All faucets in the twinpro series feature Ecototal cartridges, which save valuable water and energy by restricting volumes and temperatures.

The systematic design of the Lb3 faucet series is the full works – all three design versions look incredibly good: from one-hole to three-hole through to bathtub rim and bath and shower mixers. The range also includes hand-sprays and showerhead holders. Summary: A timeless design with innovative technology; the Ecototal technology in the mixing system facilitates a particularly energy and water saving approach when handling the valuable commodity, water.

modernap^{plus}

The functional aesthetic of these faucets follows the trapezoidal geometry of the sanitary ware with the same name. Their handy bracket not only gives these faucets unmistakable character, but makes them particularly easy to use. This means that you literally have everything to hand. To ensure the right washbasin mixer is always available for every modernap plus washbasin, they come in two sizes.

modernap plus also provides beautiful and functional faucets for bathtubs and showers, and every situation.

All faucets in the modernaplust series are equipped with Ecototal cartridges, which save valuable water and energy by restricting volumes and temperatures. Ecototal+, with its central cold water position, offers potential for additional energy savings.

modernaplust faucets not available in UK/IRL.

Just let go and relax. Because everything is taken care of – down to the last detail. The precise selection of water temperature, safety switch and automatic hot water cut-off when the cold water supply fails make Thermofit a precision-engineered top-of-the-range model. Thermofit – delivers the right mix, guaranteed.

quadriga

Clarity is a matter of form, unmistakable and timeless. It always works well, everywhere – and in particular where clear-cut design is called for. Smooth surfaces joined together in a square-edged fashion; this is how this faucet crowns the washbasin, shower or bathtub. quadriga – uncompromisingly honest.

A bath wouldn't be a bath without the water. By the same token, mimo would not be complete without mimo faucets. The system features a joystick control for washbasin and bidet, and Ecototal cartridges for bathtub and shower. All this is packaged in a perfect form that is imbued with the mimo charm. Try it. Take a chance on something new. That's what makes life exciting. mimo is pure lust for life. The broad water spouts will catch the eye in any modern bathroom. A new era can begin. mimo – because change is fun.

All faucets in the mimo series (with the exception of basin and bidet mixers) are equipped with Ecototal cartridges, which save valuable water and energy by restricting volumes and temperatures.

lumitouch

LAUFEN electronic faucets are named "lumitouch". They come in three different designs. They have a special function: touch control, and three preset temperature settings. This makes them particularly easy to use, and the faucet body with its pared-down form is all the more convincing due to the absence of the control lever. The individual functions are subtly indicated by a coloured LED light. This makes the faucet eye-catching, even when not in use: in "ambient light" mode, the light gently changes colour.

ONE TAP: cold water starts running, this is indicated by a blue light.

TWO TAPS: mixed water starts running, this is indicated by an orange light.

THREE TAPS: warm water starts running, this is indicated by a red light.

AMBIENT LIGHT: the faucet enters this atmospheric mode when not in use. The ring lights up in blue, orange and red in turn (only when connected to the mains).

The box

Multi-faceted: This kind of concealed system is totally practical – all essential components well protected inside the wall. Flexibility and easy handling are a must when it comes to installation in practise. But the Simibox can do more: A few hand movements are all it takes to change between cold and warm water and switch between shower and bath connections. In addition, the integrated stop cock allows easy maintenance of the system.

The functional unit

Well thought out: The functional unit, the heart of the faucet, is embedded between the base unit visual elements and contains the mixing cartridge and diverter, and guarantees unadulterated bathing or showering pleasure – thanks to ingenious tried-and-tested quality Swiss technology. Versions, including safety device for bathtubs with inlet overflow mixer cartridges and thermostatic mixer cartridges, are currently being developed. After all, faucets should also be capable of incorporating future developments.

The decor

Beautiful form: cutting-edge technology behind the wall means nothing without an attractive envelope to complete the package. The high-quality design of our concealed mixer perfectly completes the shower and bath experience. The pre-assembled set is made up of the functional unit, together with the corresponding decorative elements, and is available to match all our important design ranges. And, if new fresh forms are required, a changeover is possible in next to no time. Whether you are looking for classical elegance, futuristic boldness or everyday simplicity – LAUFEN concealed mixers have something for every taste. And the visible components can be replaced in next to no time.

Rain shower heads

The LAUFEN range of shower heads combine the comfort of the standard shower with the experience of a warm refreshing summer rain on the skin. The stainless steel rain shower heads, available in a variety of styles – square, rectangular, round or oval – can be selected to suit the architectural style of the bathroom, whether it be pure clean lines or organic flowing contours.

Lb³ Accessories

Lb3 accessories make everyday routines easier. With the help of these useful little details you have everything within reach, neatly placed and easy to find. They not only help organise your bathroom, but also your mind – thus giving you the space you need to concentrate on the essentials.

Ceramic shelves and accessories

It is not always easy to find what you want: High-quality ceramic accessories. Whether under-mirror shelves in a variety of sizes, toilet paper holders or toilet brush holders, our high-quality products bestow elegance and lend a certain majesty to your bathroom. In addition, these elegant accessories are practically indestructible and particularly easy to clean. As well as all that, practical ceramic tableaus provide easy-to-clean shelving under your washbasin.

Made with love!

Children love animals, and the more imaginative, colourful and friendly the better. We have succeeded in creating a child-friendly environment for early childhood hygiene. With its rounded shapes and strong colours, and taking inspiration from real life plants and animals, our bathroom reflects the typical playful and imaginative world of pre-school children. This product family is practical and adapted precisely to the needs of children.

product
design
award
2011

Strong individual design with a kick: For Andreas Dimitriadis, a perfect product is one that does not just fulfil the expectations of the customers, but one that surprises them with its unexpected positive aspects as they use it. It is guided by the philosophy of the proprietor of the platinumdesign studio, together with his team of designers, CAD specialists and modellers, to develop strong individual designs that offer customers added value, that appeal to them emotionally and reflect the quality of the product visually, thus building up a strong brand trust. Andreas Dimitriadis: "With florakids, LAUFEN has succeeded in creating a positive, lively and child-friendly environment for early childhood hygiene. This bathroom has been created exclusively for children!"

The florakids positive and playful washbasin is designed entirely with the needs of children in mind. Owing to its size, children can reach the faucets effortlessly. It can be used from all sides by more than one child at a time and its generous shelf surface leaves plenty of room for paintbrushes, beakers and toothpaste. Its round, corner-free forms also help prevent injuries. The washbasin is available in white, red and green. The colours have been fired on and are scratch-resistant, hard-wearing and non-toxic.

The rounded form of the curvepro faucets not only lends a playful touch, the powder-coated lever grip in red or green is easy for children to grip and use. The corresponding single-lever mixer with Ecototal cartridge ensures lower water consumption and scalding risk.

The new barrier-free bathrooms transform comfort and practicality into good design and make an important contribution to independent living. LAUFEN pro liberty is a useful solution for hospitals, nursing homes and senior citizens' residences, as well as for private homes. Its simplified lines make it a perfect match for the comprehensive range of LAUFEN pro baths and make standard-compliant use of the bathroom a much more comfortable experience. LAUFEN pro liberty conforms to DIN 18040 and SIA 521 500. The washbasin impressed the jury and customers at the Universal Design Awards 2011 and the Customer Favorites 2011.

libertyline/rehab

Barrier-free according to DIN standards and ÖNORM (Austrian Standards Institute). The 18024 and 18025 standards define the pre-conditions that bathrooms and toilets must fulfil in order to receive the "DIN barrier-free" certificate. The liberty line range has been awarded the "DIN barrier-free" standard and includes a wheelchair-compatible washbasin without overflow hole and with a concealed siphon. The WC, which must be at least 5 cm higher, has a projection of 70 cm and can be mounted as a wall-hung WC using existing connections. rehab is another wheelchair-compatible washbasin made by LAUFEN which is available without overflow hole.

Special articles

The sanitary ware used in public buildings is subject to far more demanding requirements than its domestic counterpart. In hospitals, schools and public conveniences they need to work perfectly over long periods and thus have to fulfil very different requirements. LAUFEN calls the products it designs to fulfil these

requirements "special articles". Particular special features, such as the clean lines they have on their upper surfaces and continuous overflow channel, give our robust sanitary ware exceptional hygiene, clear lines without nooks and crannies where germs can accumulate, and lasting quality.

Product features and benefits: Sanitary ware

Sanitary ware production: Tradition and innovation

The basic ingredients for making ceramics have always been naturally occurring raw materials: Kaolinite, clay, feldspar and quartz sand form the basis for this extremely durable and hard material. The individual components of this malleable material are combined, homogenised and cleaned as part of a unique and very protracted process at LAUFEN. The resulting slurry – the pourable starting material for ceramics – is poured into pre-prepared plaster moulds or shaped using a special pouring process developed at LAUFEN.

The formability and pourability of the material allows the creation of a wide variety of sanitary ware products, but nevertheless always poses a manufacturing challenge, especially when creating objects with complex geometries. Dried and glazed blanks are then baked in a kiln at temperatures up to 1240°C. Such extreme kiln temperatures ensure the hardness and durability of our high-quality LAUFEN products.

Ceramics, through their smooth, easy-to-clean surface, fulfil the highest hygiene standards – chemical acids, strong cleaning fluids or hydrochloric compounds hardly affect the material. Due its light fastness, versatility and pleasant appearance, ceramic is the most popular material used to manufacture high-quality sanitary fittings.

Ceramics or synthetic materials: Ceramic is the material which has been traditionally used in the bathroom over the centuries – and with good reason. The superiority of the material is evident, particularly in terms of hygiene, useful lifetime, environmental compatibility and durability. However, washbasins made of plastics and mineral-based cast materials are also available on the market, which present a design challenge to producers of sanitary ware. LAUFEN has always had a reputation as an innovator in the sanitary sector and is always striving to improve the materials and production techniques it uses. As a result of these efforts, new ceramic compositions have been developed that allow smaller tolerances and even more precise corner radii or large flat ceramic items. Made to measure washbasin solutions ensure that ceramic sanitary ware can be fitted with millimetre precision into bathroom floor plans. Ceramics therefore deliver outstanding performance in all respects.

Top recycling qualities: Ceramic is the oldest malleable material used by mankind – and consists exclusively of naturally occurring raw materials. Ceramic is 100 % recyclable and can be reintroduced into production processes as a ground powder or reused as a valuable raw material in other industries.

LCC stands for **Laufen Clean Coat**. This innovative ceramic surface finish is a vitreous silicate ceramic coating which is fired on top of the original glaze. LCC is an extremely hard, indeed almost indestructible indivisible part of the ceramic object to which it is applied. The benefits of this process: With a roughness of only 4 nanometers, LCC is entirely free of pores. Thanks to this feature, lime, dirt and bacteria have practically nowhere to gain a foothold – and even if they do, they can be removed much more easily. A hydrophilic effect caused by the material ensures that dirt particles are more easily washed away on flushing. In addition, cleaning and disinfection fluids spread over the surface more easily and thus work more effectively. This is an ideal solution for the rigorous demands of everyday cleaning – for example in hotels or clinics – as LCC also means the sanitary ware is highly resistant to aggressive cleaning agents and chemicals. LCC ensures the highest standard of cleanliness and hygiene in the long-term. Even after years of use, the sanitary ware remains smooth and shiny, just as it was when it was brand new, in private bathrooms and public and semi-public areas.

The innovative glaze for durable hygiene.
Die innovative Glasur für dauerhafte Hygiene.
L'émmail innovant pour l'hygiène durable.
Lo smalto innovativo per un'igiene duratura.

Our **concealed ceramic overflow system**, the alternative to standard overflows for washbasins and bidets, has many benefits. Thanks to our overflow system which is invisible from the outside, our washbasins and bidets no longer have a visible overflow hole, which not only improves the appearance of the product, it also makes cleaning much easier. This hygienic and aesthetic innovation is very simple: water rises in a concealed internal channel in parallel with the water inside the washbasin, and overflows into the run-off when the water reaches the maximum level. Another attractive detail of LAUFEN washbasins is the ceramic cover on the pop-up waste valve, which is available in a variety of glazes. These covers are available with a wide range of pop-up waste valve versions for many washbasins and bidets (e.g. the ILBAGNOALESSI One and the dOT, PALOMBA COLLECTION, Lb3, mimo, and others).

Product features and benefits: Sanitary ware

The latest generation of **LAUFEN water-saving WCs** is optimised to flush with two reduced flushing volumes: 4.5 or 3 litres of water. Compared to today's 6/3 litre dual flush or 6 litre single flush standard, these new models provide substantial water savings. With an average of 5,000 flushes per WC per year, the yearly water saving is at least 6,000 litres, or more than 27,000 litres if we take into consideration that 9 or even 12 litre models are still in use.

LAUFEN products marked with the green 4.5/3L logo are not only fulfilling the requirements defined in the harmonized standard EN 997 Class 1 Type 5 and Class 2 (that cover the whole European territory), but also fulfill the challenging Australian requirements of SAI/Wells 4 Stars.

In order to achieve this water saving the LAUFEN floorstanding WC combination shall be combined with its dedicated cistern having the option .75x. LAUFEN wall-hung or floorstanding WCs shall be combined with any concealed cistern, locally available and approved for 4.5/3 litre flushing.

Please note that a suitable downstream drainage system must be built for this kind of water-saving WCs. In case of restrictions of the existing drainage system or local regulations LAUFEN WCs marked with the green 4.5/3L logo can also be flushed with standard 6 litre flushing volume.

The LAUFEN design philosophy goes into the fine detail: as a matter of principle, many of our products do not reveal at first glance how they are fixed. Sophisticated **concealed installation solutions** help a product to be installed easily, to remain securely and permanently fastened and ensure an enhanced aesthetic appearance without any visible mountings. Such solutions also help avoid corners where dirt can collect.

The bathroom is private. So that it stays that way, LAUFEN provides **sound insulation sets**, consisting of specialised foam and rubber elements for its washbasins and wall-mounted WCs. These elements considerably reduce the amount of noise due to usage and functions that passes through the wall into neighbouring rooms.

Depending on the structural situation, a sound reduction of up to 9 decibels can be achieved, which means that noise is reduced by almost half.

These sets have been tested against SIA 181 and DIN 4109 and certified by Fraunhofer.

- 89269.1 sound insulation set for washbasins up to 80 cm
- 89269.2 sound insulation set for washbasins of 80 -100 cm
- 89269.3 sound insulation set for washbasins of 110 -180 cm
- 89269.4 sound insulation set for WC

Thanks to our convenient **lowering system** many of our WC covers and seats close gently and quietly. For easier cleaning, all LAUFEN seats can be removed with a simple hand movement.

LAUFEN seats have been comprehensively tested: amongst others the test includes opening and closing 50,000 times.

Made-to-measure sanitary ware: Many large LAUFEN washbasins can be manufactured made-to-measure at the factory. Using this innovative production technology, we can manufacture sanitary ware to fit the plan of your bathroom. On the one hand, the ceramic can be cut to size – even on the diagonal. On the other, even freestanding side elements can be custom made without any visible side panel attachments.

The standard solution for the majority of urinals is to flush with two litres of water. However LAUFEN also provides particularly **efficient urinals**, which flush using a maximum of one litre of water. And for public use, we even have urinals with a special siphon which is particularly easy to maintain: The 0-litre solution. The "water-saving mode" option is also available with which cleaning takes place only after a particular defined time period.

The installation dimensions of WCs are not always identical: In many renovation situations the LAUFEN **Vario outlet** can make it easier to connect the WC to the sewage network.

Both horizontal and vertical outlet wall clearances of up to 305 mm for washdown are possible.

Maximum wall clearance for vertical floor outlet

Minimum wall clearance for vertical floor outlet

Horizontal wall outlet

Product features and benefits: Wellness

When choosing the **bathtub surface** the choice depends on individual preference and intended use. In order to be able to provide the right solution for all situations, LAUFEN provides three different bathtub materials:

Acrylic bathtubs and shower trays:

Bathtubs and shower trays made of sanitary acrylic have benefits due to the insulating properties of the material and its warm surface. Together with an underlay made of hard foam, the material helps your bath water retain its temperature for a long time. LAUFEN sanitary acrylic is integrally coloured, is light and colour fast and easy to clean.

Steel bathtubs and shower trays:

bathtubs and shower trays in enamelled steel are hygienic, and resistant to acid, scratching, impacts and abrasion. LAUFEN steel bathtubs are produced using heavy 3 and 3.5 mm enamelled steel; they are extremely dimensionally stable and come with an anti-slip coating. In addition, they can be fitted with an optional structural sound insulation system.

Ceramic shower trays:

Modern shower trays made of sanitary ceramics can fit harmoniously into your bathroom. Like any of the LAUFEN ceramic products, they are characterised by their especially long life and tangible high-quality. Our attractive shower trays offer a conveniently low step-in height and can be supplied with an antislip coating, if required.

Many of LAUFEN bathtubs are available with precise-fitting sanitary acrylic skirting for a variety of installation situations. These **acrylic panels** are secured quickly and easily using a magnetic mounting system and are an alternative to labour-intensive bricking in of the tub. These panels are made of the same high-quality and easy-to-clean acrylic as the tubs and allow easy access to the plumbing under the tub for maintenance purposes.

Whirlpool – Wellness at home: LAUFEN combines the rejuvenating energy of water, air and underwater lighting for reviving massages in your own bathtub at home. A feast for the senses – in total privacy.

1

2

Air nozzles (1):

Up to 90 nozzles positioned in the bathtub floor effectively revive your body all over. The outlets are installed flush with the bathtub floor and therefore do not impede enjoyment of the whirlpool. The warm and tingling ozonised air is blown into the water via air conduits under the base of the tub. The system is self-drying and therefore hygienic and easy to maintain.

Water nozzles (2):

Depending on the model, LAUFEN whirlpools are equipped with between 10 and 14 water massage nozzles. Water nozzles are installed at the sides, the direction and power of which can be individually adjusted. A number of adjustable rotating microjets are used in the back area, and relaxing massage jets are used at the feet.

LAUFEN **sound insulation sets** for bathtubs and shower trays significantly reduce the transmission of sound to neighbouring rooms and ensure a private, undisturbed bathing experience – without disturbing the neighbours. Irrespective of the structural conditions, a sound reduction of 10 or even 16 decibels can be achieved. Even a 10-decibel reduction corresponds to a 50% reduction in audible noise. LAUFEN sound insulation sets are tested against SIA 181 and DIN 4109 and are certified by Fraunhofer.

The LAUFEN **installation kit** made of hard foam allows a wide range of shower trays to be installed flush with the floor – and also assists with sound and heat insulation. A protective peripheral strip securely permanently prevents water from entering between the tiles and tray.

The LAUFEN **wellness remote control** is installed on our top whirlpool models and ensures maximum comfort. The waterproof casing of a media player has a sophisticated design and conceals state-of-the-art technology: As well as controlling the whirl system, the system also includes an MP3 player, a built-in radio and an amplifier with a powerful 4.1 Surround Sound system. Naturally, the remote control system also contains pre-set whirl functions specific to wellness requirements. The remote control is kept on the rim of the bathtub, where hidden magnets hold it firmly in place.

The wellness functions of the LAUFEN whirlpool can also be controlled by **touch-sensitive areas** on the bathtub rim: The system is safe, scratch-resistant, hygienic and easy to clean – and does not detract from the aesthetic of the bathtub.

LAUFEN bathtubs and shower trays conform to applicable European standards and are tested and monitored on-site by the independent testing institute LGA Quali Test GmbH.

Antislip is a surface treatment which is applied to glazed and enamelled surfaces and then fired on and is thus optimally integrated into the surface structure. The surface offers a secure grip and is also easy to clean, and resistant to acids and scratching. Antislip has been tested against the German industrial standard DIN 51097 and offers higher than average antislip performance. With or without antislip, LAUFEN shower trays feel comfortable on the skin.

Product features and benefits: Furniture, lights and mirrors

Furniture surfaces in the bathroom are designed to deal with the room's special climate conditions. LAUFEN provides a range of different surfaces, all optimised for their intended use and come with a guaranteed long useful life.

Real wood veneer:

A cosy bathroom in wood. The classy wood veneers provide the haptics and optics of real wood. They are resistant to moisture and equipped with reinforced edges, making them resistant to impacts. These real wood veneers include those used in Lb3, in the PALOMBA COLLECTION (oak and Makassar) and ILBAGNOLESSI One 'noce canaletto'.

Painted furniture surfaces:

Our classic high-gloss paint finish, using two-component water-resistant paints, offers perfect surfaces with no unevenness and a wide range of colours. LAUFEN painted surfaces include ILBAGNOLESSI dOt, the ILBAGNOLESSI One white furniture and the fronts of the mylife range. LAUFEN also offers 38 additional special paints (shown on right) for the case and LAUFEN pro furniture ranges.

Film coatings:

Film coatings are pulled over corners, thus ensuring the furniture surfaces are joint-free and not sensitive to water. They are scratch, water and light-resistant. Their flexibility offers a great deal of design freedom in terms of the forms used, such as integrated handles, for example. LAUFEN uses film coatings in its LAUFEN pro, modernaplust and case ranges.

Laminated surface:

These surfaces are easy to care for and clean, they are light-resistant and odourless and not sensitive to alcohol, organic solvents and water. LAUFEN laminated surfaces are very impact and scratch-resistant and are used, for example, in the PALOMBA COLLECTION and the mylife range.

PET high gloss surface:

with mimo furniture LAUFEN has opted for an innovative, easy-to-clean and extremely durable high gloss surface. This is made of PET, a material that is particularly easy to recycle. It also has a lot of benefits in terms of its appearance.

Tidy storage systems in drawers of the ILBAGNOLESSI One bathroom furniture range ensure tidy storage and prevent the return of chaos every time a drawer is closed fast.

Slamming of doors is not inevitable: At LAUFEN, **soft close** means gently-closing furniture doors and drawers. The system is integrated as standard into all LAUFEN furniture. In this case, quality can be felt and not heard.

Comfort in every detail: The flexible and adjustable **3D mounting system** makes installation LAUFEN furniture on the wall quick and easy.

Optional: 38 special paint finishes

LAUFEN provides a wide range of colours for the case and LAUFEN pro furniture ranges using special matt paint finishes as well as the three standard decors: 38 colour tones especially created for LAUFEN allow the colours of your bathroom furniture to be coordinated with your bathroom. For technical reasons, this option is not available for case for living style products and case wash-basin countertops.

Product features and benefits: Furniture, lights and mirrors

LAUFEN undercounter furniture is exclusively equipped with an innovative **space-saving siphon** (1). This dispenses with the need for siphon cut-outs in the drawers (2), reclaims valuable storage space and ensures unlimited use of internal space.

1

Light in the bathroom – for bathing in light: With illuminated mirrors and mirror cabinets, LAUFEN offers a wide range of individual lighting solutions. From integrated LED lighting (1), to glass-edge lighting (3) in the cabinet shelving, from indirect atmospheric lighting (2) which lights up the entire room to optimum useful light directly in front of the mirror for applying make up or shaving.

2

3

As an option for the case mirrors, LAUFEN offers an integrated contact-free **sensor switch** for mirror lighting. This means you can switch the light on by putting your hand near the mirror, without having to touch the mirror at all.

The lighting elements used in LAUFEN illuminated mirrors in the case range can be replaced very easily and quickly. The mirrors can remain on the wall during this process. As is the case with all electrical equipment in the bathroom furniture – they are protected from all directions against splash water and dust according to protection class IP 44.

Product features and benefits: Faucets

Saving water and energy without compromising comfort – this is the speciality of the **Ecototal** and **Ecototal+** energy-saving technologies used in LAUFEN faucets. The ceramic control cartridges within the faucets contain flow and temperature regulators – in order to draw off the full quantity of water or really hot water, a certain resistance must be overcome when opening the tap. Using this LAUFEN technology, up to a third of energy and water consumption can be saved without compromising comfort. **Ecototal+** also provides an intuitive energy-saving function which is ideal for public sanitary facilities: When the lever is in the centre position, only cold water and not mixed water is drawn off – why is often sufficient when washing hands.

LAUFEN **electronic faucets** are referred to as **lunitouch** and offer a number of special functions: they respond to a gentle tap and have three preset temperature levels. This makes them particularly easy to use, and the faucet body with its pared-down form is all the more convincing due to the absence of the control lever. The individual functions are subtly indicated by a coloured LED light. This makes the faucet eye-catching, even when not in use: in "ambient light" mode, the light gently changes colour.

LAUFEN **rain shower heads** are impressive during day-to-day operation, not least due to their appearance, but also because of their functional features: After the water is turned off, they do not drip and therefore remain virtually free of lime deposits, as water from the nozzles does not spray against the shower head. They are available in three different shapes – square, rectangular and oval.

On-wall installation

In-wall installation

Behind-wall installation

The **Simibox** is a practical universal concealed mounting unit by LAUFEN. Apart from allowing easy and secure installation of faucets, it also allows the concealed mixer to be inspected later on – without having to shut off the main stopcock. The Simibox is suitable for any building project. The installation process remains largely the same no matter what construction method is being used. Consisting of a rough-in set and pre-assembled set, it also allows the faucets to be replaced at any time without having to open the walls. During the building process the top-end faucets are installed only as the last step after all other building workers have left, to preserve their surface finish.

Overview of ceramic colours

All design lines*, washbasins, products for special applications, ceramic accessories and urinals are available in the following ceramic colours:

-  **.000** white
-  **.400** white LCC (Laufen Clean Coat)

The following colours are also available on request:

-  **.018** bahama beige
-  **.037** manhattan
-  **.046** whisper blue
-  **.049** pergamon
-  **.050** aegean
-  **.757** matt white

* A different range of colours is available for the following design lines:

ILBAGNOALESSI One

-  **.400** white LCC (Laufen Clean Coat)
-  **.797** warm grey

ILBAGNOALESSI dOt

-  **.400** white LCC (Laufen Clean Coat)
-  **.716** matt black

living city/living square

-  **.000** white
-  **.400** white LCC (Laufen Clean Coat)
-  **.757** matt white
-  **.020** black

mimo

-  **.000** white
-  **.400** white LCC (Laufen Clean Coat)
-  **.016** black
-  **.044** pink
-  **.017** white/black
-  **.045** white/pink

florakids

-  **.000** white
-  **.400** white LCC (Laufen Clean Coat)
-  **.062** white/red
-  **.072** white/green

Overview of ceramic options

Options for washbasins

- .104** one tap hole, centre
- .105** one tap hole, left
- .106** one tap hole, right
